龍源電力集團股份有限公司

CHINA LONGYUAN POWER GROUP CORPORATION LIMITED*

(A joint stock limited company incorporated in the People's Republic of China with limited liability)

(Stock Code: 00916)

30 2026

This announcement is made pursuant to Rule 13.09 of the Rules Governing the Listing of Securities on The Stock Exchange of Hong Kong Limited and the Inside Information Provisions under Part XIVA of the Securities and Futures Ordinance (Chapter 571, Laws of Hong Kong).

The unaudited consolidated results for the nine months ended 30 September 2026 of China Longyuan Power Group Corporation Limited* (the "") and its subsidiaries (the "") are as follows.

For the nine months ended 30 September 2026, revenue of the Group amounted to RMB21,242 million, representing a decrease of 5.19% over the corresponding period of last year. In particular, revenue from the wind power segment amounted to RMB17,486 million, representing a decrease of 8.79% over the corresponding period of last year, whereas revenue from the solar power segment amounted to RMB3,552 million, representing an increase of 19.81% over the corresponding period of last year, and revenue from other segments amounted to RMB205 million, representing a decrease of 24.37% over the corresponding period of last year. Net profit attributable to equity holders of the Company amounted to RMB3,007 million, representing a decrease of 35.75% over the corresponding period of last year.

From January to September 2026, the Group recorded additions of 2,048.92 MW of new energy consolidated installed capacity, including 902.60 MW of newly added consolidated installed capacity of wind power and 1,146.32 MW of newly added consolidated installed capacity of solar power. This was mainly attributable to the completion of equity closing of Guohua (Cangzhou) Integrated Energy Co., Ltd. by the Company, which brought in the 1,090 MW Cangzhou Lugang Hydrogen City photovoltaic project. As of 30 September 2026, the Group's total consolidated installed capacity reached 48,043.21 MW, including 33,049.97 MW of wind power, 14,987.14 MW of solar power, and 6.10 MW of other renewable energy.

From January to September 2026, the average utilisation hours of wind power of the Group was 1,379 hours, representing a decrease of 132 hours as compared with that in the corresponding period of 2025, mainly due to the fact that wind resource levels in the regions where certain large-capacity projects of the Group are located declined year on year and curtailment increased, with the average wind speed falling by 0.10 m/s as compared with that in the corresponding period of last year.

As of 30 September 2026, power generation of the Group on consolidated basis amounted to 56,250,365 MWh, representing a decrease of 0.52% over the corresponding period of 2025. In particular, wind power generation amounted to 43,894,219 MWh, representing a decrease of 4.97% over the corresponding period of last year; and solar power generation amounted to 12,352,004 MWh, representing an increase of 19.29% over the corresponding period of last year.
